

## NOTES-Proving Rhombus and Squares on a Coordinate Plane

### ***PARALLELOGRAMS ON THE COORDINATE PLANE***

Objectives:

- Show that a quadrilateral is a parallelogram on the coordinate plane
- Identify and verify parallelograms

DISTANCE FORMULA:

MIDPOINT FORMULA:

SLOPE FORMULA:

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$(x_m, y_m) = \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

FORMULAS & THE COORDINATE PLANE	
FORMULA	WHEN TO USE IT
Distance Formula: $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$	To determine whether... <ul style="list-style-type: none"> <li>• Sides are congruent</li> <li>• Diagonals are congruent</li> </ul>
Midpoint Formula: $(x_m, y_m) = \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$	To determine... <ul style="list-style-type: none"> <li>• The coordinates of a midpoint of a side</li> <li>• Whether diagonals bisect each other</li> </ul>
Slope Formula: $m = \frac{y_2 - y_1}{x_2 - x_1}$	To determine whether... <ul style="list-style-type: none"> <li>• Opposite sides are parallel</li> <li>• Diagonals are perpendicular</li> <li>• Sides are perpendicular</li> </ul>

QUADRILATERAL	PROVE:
RHOMBUS	First prove it's a parallelogram, and then prove... <ul style="list-style-type: none"> <li>• Two consecutive sides are congruent</li> <li>• The diagonals are perpendicular</li> </ul> OR... <ul style="list-style-type: none"> <li>• All four sides are congruent</li> </ul>
SQUARE	<ul style="list-style-type: none"> <li>• It's a rectangle <u>and</u> a rhombus (see above)</li> </ul>

**Method:** Prove that all four sides are congruent.

---

Example 1: Plot and label each point. A(1, 3), B(4, 1), C(1, -1), and D(-2, 1)

**Prove it!**

Find the **length** of each side.

$$AB = \underline{\hspace{2cm}}$$

$$BC = \underline{\hspace{2cm}}$$

$$DC = \underline{\hspace{2cm}}$$

$$DA = \underline{\hspace{2cm}}$$

- What conclusions can you make from the side lengths?

Find the **slope** of each side.

$$\text{Slope of } AB = \underline{\hspace{2cm}}$$

$$\text{Slope of } DC = \underline{\hspace{2cm}}$$

$$\text{Slope of } BC = \underline{\hspace{2cm}}$$

$$\text{Slope of } AD = \underline{\hspace{2cm}}$$

- What conclusions can you make concerning the relationship of the slopes of the sides?

Based on my answers above, I have proven this shape to be a \_\_\_\_\_

because...

**Method:** First, prove the quadrilateral is a rhombus by showing all four sides is congruent; then prove the quadrilateral is a rectangle by showing the diagonals is congruent.

Example 2: Plot and label each point.  $A(-5, 6)$ ,  $B(3, 7)$ ,  $C(4, -1)$ , and  $D(-4, -2)$

**Prove it!**

Find the **length (distance)** of each side.

$AB = \underline{\hspace{2cm}}$

$BC = \underline{\hspace{2cm}}$

$DC = \underline{\hspace{2cm}}$

$DA = \underline{\hspace{2cm}}$

- What conclusions can you make from the side lengths?

Find the **slope** of each side.

Slope of  $AB = \underline{\hspace{2cm}}$

Slope of  $DC = \underline{\hspace{2cm}}$

Slope of  $BC = \underline{\hspace{2cm}}$

Slope of  $AD = \underline{\hspace{2cm}}$

- What conclusions can you make concerning the relationship of the slopes of the sides?

Based on my answers above, I have proven this shape to be a \_\_\_\_\_  
because...

- 1.) Prove that a quadrilateral with the vertices  $A(-1,3)$ ,  $B(3,6)$ ,  $C(8,6)$  and  $D(4,3)$  is a rhombus.

- 2.) Prove that the quadrilateral with vertices  $A(-1,0)$ ,  $B(3,3)$ ,  $C(6,-1)$  and  $D(2,-4)$  is a square.
