

How to Simplify a Radical

Identifying parts

Parts of a Radical

$$\sqrt[2]{\quad} = \sqrt{\quad}$$

$$1x = \underline{1}x$$

How to simply:

1. Identify the index.
2. Break down the radicand to factors. *Factor Tree*
3. Group like factors.
4. If group has the same number of members as the index then a representative for the group will be placed in front.
5. Any factors that do not have a group remain inside the radical.

Examples:
